Summary

GestaltRoni is an international scientific, technical business and asset acquiring project. The aim is to eradicate poverty by creating jobs and or permanent employment for the average person.

Achieved through the acquisition and construction of real estate assets, telecommunication and various adjacent and perpendicular business level ventures.

Main goal of the project is the organization of a highly profitable business with production designed with respect for structures to house practices that generate revenue. The organizational and legal formation of the business is a limited liability corporation with distribution of profit to owners, investors and shareholders.

The commercial goal is to produce self-sufficient cash cow entities that cover all bottomline, allow for the timely allocative frequency of the profit margin ratio to various funds and containers and the dissemination of liquid assets to housing structures with *empathy* for working partners and shareholders.

The immediate GR goal is to collect the necessary funding to complete the pre-launch process that includes international and federal legal concerns and bothersome obligations. Financing of the practical implementation of the GR goals carries out at the expense of funds raised during pre-launch.
